6100 Series Low Energy Swing Door Operator

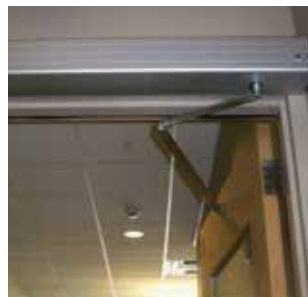

When cost considerations dictate that simple yet efficient swing door systems be specified, record-usa's 6100 series swinging door operator eases your selection process by offering a wide range of applications and openings in which to choose from:

record-usa's exciting 6100 series swing door operator is ideal for use in those applications that demand quiet, smooth performance but without all the add on features in products of this type that generally increase the sell price to the building owner.

With most competitive products of this nature, in order to reduce cost, the manufacturer opts to provide less expensive components that many times result in a loud whirring sound as the door opens. Not with record-usa! The Swiss engineered precision technology promises the use of the 6100 on any interior doorway without the fear or concern of the door causing a disruption in patient rooms, class rooms, doctor offices or even libraries.

Able to be quickly programmed and adjusted with the same hand held programmer as both the 5100 series sliding door and the 8100 series swinging door, the 6100 series design allows premium functionality at a reduced cost.

record-usa's unique 6100 series allows full programmability and functionality on a wide range of applications to meet most any budgetary constraints. Consult record-usa today to design your entrance needs!
